Piyush Das

AI Integration Specialist • Full-Stack Engineer

India

Professional Summary

Highly motivated AI Integration & Full-Stack Engineer specializing in leveraging advanced APIs to build robust, intelligent web applications. Proven track record of developing high-performance, data-intensive software and engineering custom architectural solutions. Experienced in optimizing complex workflows, orchestrating AI logic via prompt engineering, and designing seamless front-end user experiences.

Core Competencies

AI Integration Specialist

Actively guides AI models via APIs (e.g., Google Gemini) and orchestrates code logic to build intelligent, dynamic applications.

Advanced Problem-Solving

Prioritizes deep, independent research and structural debugging to engineer highly optimized, crash-resistant software systems.

Full-Stack Architecture

Proficient in designing end-to-end systems from responsive frontends (React) to robust backend APIs (Node.js) and data parsing pipelines.

Skills & Technical Arsenal

TypeScript JavaScript Python React Next.js Node.js Java C

Google Gemini API MCP Cursor Antigravity SQLite Pandoc

Unity Daz3D Ren'Py

PC hardware troubleshooting, network configuration, cybersecurity fundamentals

Selected Projects

AniRec Public

Full-Stack Engineer

Engineered an AI-powered Anime Recommender using React, TypeScript, Node.js and SQLite. **AI Integration:** Orchestrated Gemini Flash for high-speed dynamic metadata extraction, and Gemini Pro for deep, context-aware recommendations. **Architecture:** Designed a custom normalization layer to unify disparate data formats and handle aggressive rate-limiting across 4 different APIs (AniDB, AniList, MAL, Kitsu).

Volex (Dev.to Winner)

Frontend Developer

Developed "Volume by Exercise" (Volex), a fitness tracking web application that **won a dev.to developer challenge**. Built with a focus on intuitive UI/UX to seamlessly calculate and track workout volume metrics.

AI-to-Docx Converter

Software Engineer

Developed a specialized conversion tool built with Next.js and TypeScript. **Parsing Engine:** Developed a custom parsing engine to intercept LaTeX syntax and convert it into OpenXML Math (OMML), ensuring complex equations render as native, editable elements in Microsoft Word rather than static images.

WhatsApp Chat Viewer

Frontend Engineer

Developed a high-performance web application designed to render WhatsApp chat files of virtually unlimited sizes locally. **Optimization:** Implemented DOM virtualization (windowing) combined with Web Workers for non-blocking file parsing, ensuring smooth 60fps scrolling through gigabytes of chat history without crashing the browser.

Bot Figurinhas & Pronounce

Software Developer

Bot Figurinhas: Engineered a Node.js bot bypassing WhatsApp restrictions to send custom animated Lottie (.was) stickers.

Namaste Pronounce: Built a JavaScript accessibility tool leveraging browser speech recognition APIs to predict and pronounce complex Indian names.

0xEtae (YouTube)

Content Creator

Founded a technical YouTube channel focused on tech problem-solving, device fixes, AI administration, and technical tips. Successfully debuted with the highly viewed "ReVanced GPhotos" tutorial.
